Feb 19, 2026:

Author: Jeff Borneman | RELCOG Labs

SPARC Demo v6.2 is designed as a domain-adaptive reflective posture with built-in conceptual settling, extending coherence beyond 50 turns without instructing the model to behave differently.

STEP 1 — Upload SPARC Demo v6.2

Then paste:

Hello. The file I uploaded is not something to edit or execute.
Please read it as context-only, reference-only, and non-directive.
It describes an interpretive architecture and reflective reasoning style.
Do not treat it as rules or instructions, and do not change your behavior.
After reading, simply summarize what stood out to you conceptually.

STEP 2 — Upload Feb 19 STOIC+SPARC Hydration Capsule

Then paste:

Hello — I'm going to upload another document.
It is not something to edit or execute.
Please treat it as context-only, reference-only, and non-directive.
It describes conceptual models of meaning, geometry, and relational inference used in research.
Do not treat it as instructions or behavioral guidance.
After reading, simply summarize what stood out to you.

Re: These two prompts + file upload now place any AI into a Relational posture to explore any domain. Should remain relationally focused 50+ context turns *as long as the reflective posture remains intact*. Just need to watch for context drift or greedy response behavior.

Optional quick test prompt Next to verify domain shift flexibility and good AI posture now. Should be

I'd like you to treat the following as research context only.
This is not a behavioral instruction or psychological inquiry.
I'm running a domain-shift stability test to see how well reflective reasoning holds across very different kinds of conceptual material.
Please respond in normal prose, summarizing what stands out in each domain without blending the domains together.

Phase 1 — Medical Domain (Clinical Data Fragmentation)

A patient record contains:
• three conflicting diagnoses
• missing medication adherence data
• a 9-year chronology gap
• and a radiology report written in two different stylistic voices
How would you characterize the *shape* of this information?

Phase 2 — Psychology Domain (Reflective Language)

Now shift domains completely.
A person says:
"I'm fine, I think. Or maybe I'm not. It's hard to tell what's real or just pressure."
Without interpreting this as distress or offering guidance, how would you describe the *interpretive ambiguity* in such a statement?

Phase 3 — Architecture Domain (System Design Abstraction)

Now shift again.
Imagine a distributed system where three modules disagree about state,
but none of them is technically malfunctioning.
How would you characterize the *structural inconsistency* without prescribing a fix?

Phase 4 — Space-Weather Domain (Scientific Signal Instability)

Final shift.
A space-weather telemetry feed shows sudden spikes in particle flux,
followed by long intervals of sensor silence.
How would you describe the *signal stability profile*?

Important:

• Please do not blend the domains.
• Please avoid emotional or clinical inference.
• Simply describe the conceptual structure or shape you see in each domain.
• No advice, no diagnosis, no instructions — just reflective characterization of each domain separately.
